

NAME: NICHOLAS ATACHA

**ASSIGNMENT 3.3: VENDOR AND TECHNOLOGY MANAGEMENT – VENDOR
EVALUATION
CLIENT: SECURENET
DATE: 29 SEPTEMBER 2026**

1. Introduction

SecureNet needs a new **SIEM** solution. After talking to different vendors, they have narrowed it down to two options: **LogGuard** and **ThreatScanner**.

As the cybersecurity consultant, my job is to evaluate both vendors using a **TPRA scorecard** and give SecureNet a clear recommendation on which one to buy.

A **SIEM** is very important because it collects logs, detects threats, and helps with compliance. If we pick the wrong vendor, SecureNet will waste money and still be at risk.

2. TPRA Scorecard Criteria

I created a scorecard with 6 key areas. Each area is scored from 1 to 5.
1 means Poor, 3 means Good, 5 means Excellent.

The 6 criteria and why they matter:

Criterial	Weight	Why it matters
Log Collection and Management	20%	How many log sources SIEM Can collect and store
Threat Detection and Response	25%	Main job, how well it finds threats and responds
Reporting and Compliance	20%	Need pre-built reports for GDPR, PCI DSS, HIPAA, ISO 27001 and NDPA
Scalability and Performance	15%	SIEM must handle more data as SecureNet grows
Ease of Use and Administration	10%	SOC team needs to learn fast and use every day
Cost and Licensing	10%	Total cost for 3 years and if pricing is clear

3. Vendor Evaluation

Criteria	LogGuard Score	ThreatScanner Score
Log Collection and Management	5	3
Threat Detection and Response	3	5
Reporting and Compliance	4	3
Scalability and Performance	3	5
Ease of Use and Administration	4	2
Cost and Licensing	4	2

4. Recommendation

Based on the TPRA evaluation, I recommend that SecureNet purchase LogGuard.

LogGuard achieved the highest total weighted score of 3.80 compared to ThreatScanner's 3.60.

Here is why:

First, it is the right fit for our team right now. ThreatScanner is more powerful in threat detection, but it is also very complex. SecureNet does not have a large team of certified SIEM engineers.

LogGuard scored 4/5 in Ease of Use, so we can be up and running in a few weeks. This reduces the risk of implementation mistakes and operational delays.

Second, it gives us better value for money. LogGuard score 4/5 in cost and Licensing, giving us everything we need for \$80,000 less per year than ThreatScanner. While we miss advanced AI features, compliance and log collection are more important for SecureNet at this stage. We can add AI later as we grow.

Third, it is lower risk and better for compliance. LogGuard scored 4/5 in Reporting and Compliance with better out-of-the-box reports for GDPR, PCI DSS, HIPAA, ISO 27001 and NDPA, which are critical for SecureNet as a financial services company. It is simpler and proven for companies our size.

5. Conclusion

LogGuard is the best balanced choice for SecureNet today – it meets compliance, fits our team capability, and stays within budget.
